

# Muhammad Akmal Aji Tasti

Fullstack developer | Backend developer

0815-7227-0822 | [akmalajitasti@gmail.com](mailto:akmalajitasti@gmail.com) | West Bandung, Indonesia | <https://www.linkedin.com/in/akmal-aji-tasti> | <https://github.com/tastytastytasty> | <https://tastytastytasty.github.io/Portofolio>

---

## Brief Profile

Full Stack Developer focused on building functional, responsive web applications that emphasize user experience. Experienced in developing backend using PHP (Laravel & CodeIgniter 3), managing MySQL, and creating frontends with HTML, CSS, Bootstrap, and JavaScript, including implementing AJAX, REST API, and Google reCAPTCHA.

---

## Experience

### Fullstack Developer Intern | PT Goldstep Teknologi Indonesia (December 2025 - April 2026)

Collaborated with one developer in developing a shoe e-commerce simulation application (UTAPS) based on CodeIgniter 3 during an internship program. Responsible for developing all features on the customer side, from implementing the interface to integrating with the backend.

- Developing authentication features, homepage, product catalog, product details, promos, wishlist, and shopping cart using CodeIgniter 3 MVC architecture.
- Implementing AJAX on the wishlist and shopping cart features to update data without refreshing the page.
- Collaborating on the development and integration of modules to make sure the app's functionality runs smoothly.
- Participate in testing and fixing bugs before the app is rolled out.

Tech Stack: PHP • CodeIgniter 3 • MySQL • Bootstrap • JavaScript • AJAX

---

## Project

### Bad Habit Tracker | Solo Developer (June 2026)

A web-based habit tracker app that helps users monitor and analyze wasted time through interactive data visualization.

- Developing the whole application from frontend, backend, to the database.
- Implementing an analytics dashboard and user habit management.
- Tech Stack: Vanilla JavaScript, HTML, CSS.

### Lelangku | Solo Developer (November 2025)

A web-based auction application that makes it easy for users to place bids on items using the web.

- Developing an end-to-end auction system from frontend, backend, to database.
- Building bidding features and auction data management.
- Tech Stack: Laravel, PHP, MySQL, JavaScript, Bootstrap.

### Tuition Payment | Full Stack Developer – Tuition Module (August - October 2025)

A web-based tuition payment application to support student payment records at RA Darul Ikhlas.

- Responsible for developing the tuition payment module from frontend to backend.
  - Built features for payment records, transaction history, and payment reports.
  - Tech Stack: Laravel, PHP, MySQL, JavaScript, Bootstrap, Tailwind CSS.
-
